

# CS 465P/565 – Fall 2019

## Full Stack Web Development

### Assignment 5 - Express

- ❑ In your repo for in-class assignments, create a **separate folder for assignment #5**. Create a folder with at least the following files:
  - ❑ index.html
  - ❑ app.js
  - ❑ package.json
  - ❑ package-lock.json
- ❑ In your **index.html**, you will need to reuse the Bootstrap form you created in a previous assignment. This time, you will assign an action and a method to the form element
  - ❑ `<form action="/submit" method="post">`
  - ❑ with this form, you will be sending the name, email, and (textarea) comment to the server
- ❑ In your **app.js**, you will create an Express (or Node) server and handle the route indicated in the form above and print the name, email, and comment in the appropriate page.

- ❑ **Middleware:** Depending on how you implement this, you may need to use middleware for serving static pages (such as index.html) and for parsing incoming request bodies.
- ❑ You will generate many node\_modules/ that you should never push to your remote repo. I would advise adding the node\_modules/ folder to the **.gitignore** file in your repo.
- ❑ Push all your code (minus node\_modules/) to your GitHub remote repo. Submit all in-class assignments during the Friday of week 8. at 11:59 PM.
